Please check your inbox, and if you can't find it, check your spam folder to make sure it didn't end up there. Please also check your spam folder. When the protection circuit is in operation the LED Indicator on the panel of the unit will light indicating that the amplifier has gone into a self preservation mode. At this time please check your system to see what is causing the protection circuit to fire. The amplifier can be reset by turning the remote power off and then on again. If the system shutdown because of a thermal overload condition, allow the amplifier to cool down before restarting. If the amplifier shutdown because of an input overload or speaker short circuit please be sure to correct these conditions before restarting the amplifier. Increasing the number of woofers per channel at low frequencies up to 100 Hz produces an acoustic coupling effect. This acoustic coupling increases your power output by 3 db per speaker. This might not sound like a lot but to produce an additional 3 db of music power should be the equivalent of adding an additional 10 watts to each speaker. When operating at 2 ohms, the amplifiers increase their power output by approximately 50 percent. The current draw of the amplifiers will also increase by about the same amount. Be sure that you have enough current to run the amplifiers into a 2 ohm load otherwise distorted music will be reproduced. PLEASE NOTE The gain control of any car audio amplifier should not be mistaken for a volume control. It is a sophisticated device designed to match the output level of your source unit to the input level of the amplifier. Do not adjust the level to maximum unless your input level requires it. Not following this instruction will result in an input overload to the amplifier and high levels of distorted musical reproduction. For speaker level input. Simply wire the speaker output leads from your source to the input of the amplifier. <http://www.gift-m.ru/userfiles/corvette-c6-user-manual-pdf.xml>

Make sure to wire the positive leads to the positive inputs and the negative leads to the negative inputs. III ELECTRICAL WIRING III All BOSS amplifiers are equipped with easy top access screw terminals. These terminals are 14 K Gold Plated to insure excellent electrical contact and to resist corrosion. See FIGURE I for electrical installation of all amplifiers. We suggest using at least 8 gauge wire for the power and ground connections. Wire the amplifier directly to the car battery. For the ground connection use the shortest possible wire to a good chassis ground point. Wire the Remote connection to auto start lead of your equalizer or power antenna. 6 8 III POWER FUSE III Power fuses protect both this amplifier and the automobile electrical system from wrong conditions. The fuse is a standard automotive type. The capacity is each Model current requirement is different. Replace only with same current rating fuse otherwise damage or fire can result. III MOUNTING III Mark the locations for the mounting screw holes by holding the AMPLIFIER in place and using a scribe or one of the mounting screws inserted in each mounting hole in turn to mark the mounting surface. If the mounting surface is carpeted, measure the hole centers and mark with a felt tip pen. Use a 100 Volt, nonpolar capacitor for a high pass crossover and a wire coil inductor to block high frequencies from the Crossover Subwoofer as shown in the figure below, Capacitor and inductor values as written in the below determine the crossover frequencies. The front and rear channels of this amplifier have this capability. Only the rear left and right channels are shown below. Don't use power amplifier unmounted. Attach this system securely to the automobile to prevent damage, particularly in the event of an accident. Don't mount this system so that the wire connections are

unprotected or are subject to pinching of damage from nearby objects. <http://www.dhanushyagroup.com/RealEstate/fckeditor/userfiles/corvette-grand-sport-automatic-vs-manual.xml>

If you need to replace the power fuse replace it only with fuse identical to that supplied with the system. Using a fuse of different type or rating may result in damage to this system which is not covered by the warranty. 13 15 III TROUBLE SHOOTING III Before removing your Amplifier, refer to list below and follow suggested procedure. Speaker and their wires be tested first. No Output a, Confirm that all terminal strip connections are firmly connected. b. Check inline and built-in fuses. EQ, Xover etc. is connected and is supplying output signal. If the channel that is silent reverses position, the problem is in the Car Stereo EQ, Xover, or other signal source or connecting cable.
