I get my most wanted eBook Many thanks If there is a survey it only takes 5 minutes, try any survey which works for you. Id get the new XTi, or get this older one here, here or here. It comes in black or silver, and with or without the swell 1855mm lens. I had borrowed some exotic lenses, and this little guy came in the bag. Yes, the D80 has a much, much better LCD and does a lot more, but heck, for half the price, you cant go wrong with one of these if you shoot Canon. By exemplary image quality I mean forget the resolution and noise details and just make some photos. If you just want great photos, your skill and how fast you can get to the controls will be bigger limitations than anything technical with the XT. The images look fantastic, so long as you know what youre doing, and even if you dont, the XT does the best it can. It replaced the original Digital Rebel introduced in August of 2003, and this Digital Rebel XT was replaced in turn by the Rebel XTi in the fall of 2006. Yes; works great. Flash Exposure Lock, Compensation and Bracketing. Designed for EXSeries flashes. Doesnt work well with older EZ, E, EG, ML or TL flashes; use them in Manual mode if at all. This will vary with the image size and quality settings. You may also select toned print effects of Sepia, Blue, Purple or Green.

I prefer to shoot color and convert later. Yes, press the blue printer button on the back. Its also molded with an invisible blackonblack icon of a bulb, but youll never see that. It varies with image complexity, so a shot with a blank background may only need 600 kB and an unusually busy landscape may take 2.8MB. The default FINE JPG averages about 3.3MB. Raw is 8.3MB. These are for the largest size image; smaller image sizes of course mean smaller file sizes. The smallest Normal JPG averages about 600kB. Charger CB2LW, with folding plug will vary by country. Rated 600 shots, no flash. The clock is powered by a separate CR2016 backup battery. The XT operates very similarly to the 20D and 30D, so the realworld, simple English users guides I wrote for the 20D applies to much of the XT. Armed with my own free Canon 20D Users Guide and Canons manual you ought to do perfectly. If not, pick up the phone and ask The menus are well thought out, even if I whine about having to use menus instead of direct access buttons as I have on my Nikons for dailyuse things like formatting cards. Forget the lab measurements. No lab can measure how images look for real subjects. Labs and test charts dont measure anything relevant. I know I worked for one of the worlds bigggest makers of digital imaging test gear for many years. We can test the technical side, but only your eye can see if it looks good. Exposure and color are dead on, and the detail and

sharpness are perfect crisp and without artifacts. Otherwise the shots are too light for my taste. This XT is much more uniform which means much better than my Nikon D80. This puts the pointer to the almost at the 1 position of the bar graph on the top LCD on the back of the camera. Confused In the USA, free phone support is at 800 OKCANON. The flash shots look great for people! The XT will be fooled by dark or light subjects if they fill the frame and make them gray instead. No big deal, all the real photos look great.

Noise and resolution are very minor issues that vary little, if at all, inside any class of digital camera. To do this, if you forget this, your setting will be forgotten. The Parameters It looks great, and so does the color. The XT came out back in the days when we were all so amazed at having any monitor at all that these teeny ones were accepted. This makes the LCD kind of useless for making adjustments while shooting, and those adjustments are critical to my ability to get perfect shots on the first try. You sort of have to shoot blind because of this. Thank goodness the XT tends to do a great job on its own without needing tweaking. They just do, and telling you that is why people love this website. The 20D and 30D are much faster as you can read at my CF Card Speed Test. I'll let you know if the XT is faster. I suspect it is. This is odd, since the Canon 20D and 30D and my Nikons couldn't care less if I left their power on for a month they go to sleep automatically. I'd buy one if I was in the Canon system! They look great, so who cares if I have personal issues with the lack of Auto ISO. It'll make you feel better, won't it Use the above address for a check, M.O. or cash. NOTE they only print in Black and White. EOS M and EOS R Full Frame mirrorless ranges deliver the power of DSLR in the body of a compact camera.
