BMW Technology BMW History. Office, Palo BMW M PERFORMANCE. I am driving a BMW 1994 325i Coupe M50B25 Euro left hand drive. I have OBDI and I couldn't enjoy LIVE DATA and some other modules. If your model is 1994 later, it will be fine. Here is the solution. With the soldering iron, bridge the pin 7 and 8 the 2 Kline together. During diagnosis, please note It is better to perform first a total diagnosis on vehicle. The total diagnosis gives you a complete idea of the global condition of the car. It is also possible that an error is stored in several modules. You should connect the device to computer via RS232 port or PCMCIA slot. Please don't use the RS232 to USB port adaptor. After you connect the device to car and computer, the green indicators should be on. MHH Auto greatly appreciates the cooperation from members on this critical issue. MHH is incompatible with Internet explorer! Special functions for some models Including service interval reset, component activation, live data, LCM reading, sync.EWS and ECU, adaptation values, and coding. Special functions for some models Including service interval reset, component activation, live data, LCM reading, sync.EWS and ECU, adaptation values, and coding. Pls uninstall or close the antivirus software before install the software, and use xp system, otherwise it will kill the software. Check your recent orders, click here. Got a problem Submit a request here.

Fully digital line switchings and MCU controlled service reset timing. UserFriendly Manuals. Product Instructions. To start viewing messages,Here is a short and sweet DIY that works for me. Of course, there are tons of other ways to make this goofy software works, so feel free to chime in. But I believe this is the most economical way for the occasional user. The pro uses a different version. I dont need Carsoft that much except for the goofy airbag light. So I cannot justify spending too much money on this diagnostic software thingy. Some of the translation of Carsoft 6.5 from German to English is suboptimal, so if you dont understand the translation, use Google translation to figure out the German words. 2. System requirement Carsoft does not require much, so even 100MB of free hard disc space and Windows 98 with 256MB is fine. Maybe I did not do something correctly, but I have no time to chase the Vista issue, so I bought a good used laptop with 9pin RS232 serial port male type. Again, this route may or may not work for you. Check bimmerforums, there are some successes there using this technique. b. Get a good used laptop from the XP era. Stay away from Windows 98 if you can. This is because a laptop running on XP can be used for other needs at home browsing Internet at reasonable speed, kids home work etc.. Look for a laptop made around the years of 2002 through 2005 with XP, these laptops usually have the 9pin RS232 serial port and approx. 256MB1GB RAM, and hard drive anywhere between 20GB80GB. This kind of laptop does Carsoft well and also allows you to use Internet at fast enough speed. Actually the used laptop with XP ran faster than my 2007 Toshiba running on Vista.

My son needs a laptop for schoolwork and other things so getting this used 2003 laptop is a winwin situation for me Compaq Evo N600C 512MB RAM, 40GB HD, XP Operating System. There are many places you can download. Here is a link Download and install Carsoft SP1. Read the pdf file. 7. My 1998 528i has the 20pin connector under the hood and OBDII port in the cabin, near the drivers L knee area. Remember to set laptop on Valve Cover clean the Valve Cover first or a secure place. Car battery must be at least 12.0V or higher, otherwise you will run into a lot of gremlins and flukes. If you have not used your car for a while, take it for a drive and check the battery voltage before the Diagnosis. Key must be in position II to perform Carsoft Diagnosis. This pic was taken from the Internet it is not my car! to show you what it looks like when you have it setup That is all and

painless if you follow it this way. The diagnostics forum is headacheinducing. Then I threw up my arms and got a good used laptop from XP era. I cannot be happier. Go this way and life will be easy for you guys. Then I threw up my arms and got a good used laptop from XP era. I cannot be happier. Go this way and life will be easy for you guys. Just a few days ago I was trying to connect from home to my works network. Long story short, Windows 7 is crap and I had to create a virtual machine with XP. Now, as Win 7 is such a crap it is Vista with a pretty taskbar really, virtual machines also run like crap, so I had to buy another hard disk and do dual boot. I really need to set my own GT1 PC, soon. Vista is crap. Windows 7 is another story. Stick to XP FTW! With Prolific RS232 USBtoSerial you gotta force it to COM1. Like in case with NCS installation. You can do it in Control Panel or with small proggy call SetCom. Digital Point modules Sphinxbased search. KLIICK ON NEXT 5. KLIICK ON NEXT 6. KLIICK ON NEXT 7. SETUP 8.
